

Contact Tracing Plan

The Tioga Central School District neither initiates nor oversees contact tracing. In the event that the Department of Health determines they need to do contact tracing, a Department of Health representative will reach out to the Superintendent for a list of close contacts of the affected individual. A close contact is defined as anyone who has been within 6 feet for 10 or more minutes. The District will cooperate fully with the Department of Health in support of contact tracing. The Superintendent will act as the point of contact for the County Health Department in the event there are other questions/ information needed for case investigation.
